

experienced is related to your ability to work as discussed in § 416.994.

(b) *Physical abilities.* When we assess your physical abilities, we first assess the nature and extent of your physical limitations and then determine your residual functional capacity for work activity on a regular and continuing basis. A limited ability to perform certain physical demands of work activity, such as sitting, standing, walking, lifting, carrying, pushing, pulling, or other physical functions (including manipulative or postural functions, such as reaching, handling, stooping or crouching), may reduce your ability to do past work and other work.

(c) *Mental abilities.* When we assess your mental abilities, we first assess the nature and extent of your mental limitations and restrictions and then determine your residual functional capacity for work activity on a regular and continuing basis. A limited ability to carry out certain mental activities, such as limitations in understanding, remembering, and carrying out instructions, and in responding appropriately to supervision, coworkers, and work pressures in a work setting, may reduce your ability to do past work and other work.

(d) *Other abilities affected by impairment(s).* Some medically determinable impairment(s), such as skin impairment(s), epilepsy, impairment(s) of vision, hearing or other senses, and impairment(s) which impose environmental restrictions, may cause limitations and restrictions which affect other work-related abilities. If you have this type of impairment(s), we consider any resulting limitations and restrictions which may reduce your ability to do past work and other work in deciding your residual functional capacity.

(e) *Total limiting effects.* When you have a severe impairment(s), but your symptoms, signs, and laboratory findings do not meet or equal those of a listed impairment in appendix 1 of subpart P of part 404 of this chapter, we will consider the limiting effects of all your impairment(s), even those that are not severe, in determining your residual functional capacity. Pain or other symptoms may cause a limitation of function beyond that which can

be determined on the basis of the anatomical, physiological or psychological abnormalities considered alone; e.g., someone with a low back disorder may be fully capable of the physical demands consistent with those of sustained medium work activity, but another person with the same disorder, because of pain, may not be capable of more than the physical demands consistent with those of light work activity on a sustained basis. In assessing the total limiting effects of your impairment(s) and any related symptoms, we will consider all of the medical and nonmedical evidence, including the information described in § 416.929(c).

[56 FR 57947, Nov. 14, 1991]

§ 416.946 Responsibility for assessing and determining residual functional capacity.

The State agency staff medical or psychological consultants or other medical or psychological consultants designated by the Secretary are responsible for ensuring that the State agency makes a decision about your residual functional capacity. In cases where the State agency makes the disability determination, a State agency staff medical or psychological consultant must assess residual functional capacity where it is required. This assessment is based on all of the evidence we have, including any statements regarding what you can still do that have been provided by treating or examining physicians, consultative physicians, or any other medical or psychological consultant designated by the Secretary. See § 416.945. For cases in the disability hearing process, the responsibility for deciding your residual functional capacity rests with either the disability hearing officer or, if the disability hearing officer's reconsidered determination is changed under § 416.918, with the Director of the Office of Disability Hearings or his or her delegate. For cases at the Administrative Law Judge hearing or Appeals Council level, the responsibility for deciding your residual functional capacity rests with the Administrative Law Judge or Appeals Council.

[56 FR 36970, Aug. 1, 1991]

VOCATIONAL CONSIDERATIONS

§ 416.960 When your vocational background will be considered.

(a) *General.* If you are age 18 or older and applying for benefits based on disability and we cannot decide whether you are disabled on medical evidence alone, we will consider your residual functional capacity together with your vocational background.

(b) *Past relevant work.* We will first compare your residual functional capacity with the physical and mental demands of the kind of work you have done in the past. If you still have the residual functional capacity to do your past relevant work, we will find that you can still do your past work, and we will determine that you are not disabled, without considering your vocational factors of age, education, and work experience.

(c) *Other work.* If we find that you can no longer do the kind of work you have done in the past, we will then consider your residual functional capacity together with your vocational factors of age, education, and work experience to determine whether you can do other work. By other work we mean jobs that exist in significant numbers in the national economy.

[55 FR 11011, Mar. 26, 1990]

§ 416.961 Your ability to do work depends upon your residual functional capacity.

If you can do your previous work (your usual work or other applicable past work), we will determine that you are not disabled. However, if your residual functional capacity is not enough to enable you to do any of your previous work, we must still decide if you can do any other work. To do this, we consider your residual functional capacity, and your age, education, and work experience. Any work (jobs) that you can do must exist in significant numbers in the national economy (either in the region where you live or in several regions of the country). Sections 416.963 through 416.965 explain how we evaluate your age, education, and work experience when we are deciding whether or not you are able to do other work.

§ 416.962 If you have done only arduous unskilled physical labor.

If you have only a marginal education and work experience of 35 years or more during which you did arduous unskilled physical labor, and you are not working and are no longer able to do this kind of work because of a severe impairment(s), we will consider you unable to do lighter work, and therefore, disabled. However, if you are working or have worked despite your impairment(s) (except where the work is sporadic or is not medically advisable), we will review all the facts in your case, and we may find that you are not disabled. In addition, we will consider that you are not disabled if the evidence shows that you have training or past work experience which enables you to do substantial gainful activity in another occupation with your impairment, either on a full-time or a reasonably regular part-time basis.

Example: B is a 60-year-old miner with a fourth grade education who has a life-long history of arduous physical labor. B says that he is disabled because of arthritis of the spine, hips, and knees, and other impairments. Medical evidence shows a combination of impairments and establishes that these impairments prevent B from performing his usual work or any other type of arduous physical labor. His vocational background does not show that he has skills or capabilities needed to do lighter work which would be readily transferable to another work setting. Under these circumstances, we will find that B is disabled.

§ 416.963 Your age as a vocational factor.

(a) *General.* Age refers to how old you are (your chronological age) and the extent to which your age affects your ability to adapt to a new work situation and to do work in competition with others. However, we do not determine disability on your age alone. We must also consider your residual functional capacity, education, and work experience. If you are unemployed because of your age and you can still do a significant number of jobs which exist in the national economy, we will find that you are not disabled. We explain age as a vocational factor in appendix 2 of subpart P of part 404 of this chapter. However, we will not apply
